Karen Rakinic stated in 1993 their burial process was handled through the local office; she will have to check the archived records to see if there is any record available.

June 8, 2015:

Ms. Rikinic stated she was unable to locate any record for this case.

[REDACTED]
have a 7 year destruction cycle and therefore no records for this case would still exist.

AUTOPSY

The autopsy was performed at Tewksbury Hospital, Tewksbury, MA on November [REDACTED]

Identification: Made by shelter personnel.

Clothing: The body is received with brown jacket, T-shirt, briefs, sweatpants, and black high top athletic shoes.

EXTERNAL EXAMINATION

The body is that of a dark-skinned male measuring 73 inches and weighing an estimated 190 lbs. There is full rigor and lividity is present posteriorly. The hair is dark and short. The face has no marks of injury. There is a 1 inch scar over the lateral upper orbital ridge on the left. The eyes have brown irides, 5 mm pupils, and clear conjunctivae. There is a mustache present. The teeth are natural and there is no trauma to the mouth. The neck, chest, abdomen, lower extremities, back and buttocks are free of change. There needle tracts present in the left anticubital fossa. The penis is circumcised and testes are present within the scrotum.

INTERNAL EXAMINATION

The body is opened with a Y-shaped incision revealing a 1 inch panniculus. All of the cavities are dry and lined by smooth fibromembranous tissue, without old or recent inflammatory process. The mediastinum and retroperitoneum are free of change.

Cardiovascular system: The heart weighs 380 grams. The epicardial surface is smooth. The left anterior descending coronary artery is 75% obstructed, 1.5 cm from the origin. The circumflex and right are free of change. The valves are thin and delicate and the myocardium is red brown, without hemorrhage, softening or fibrosis. The aorta and major arteries are intact and free of atherosclerosis. The veins are free of thrombi and emboli.

Respiratory system: The right lung weighs 870 grams. The left 820 grams. The pleura is dark purple. The parenchyma is edematous and congested, without tumor, fibrosis or consolidation noted. The tracheobronchial tree is unobstructed and lined by tan mucosa. The neck organs are free of trauma.

Digestive system: The tongue is left in-situ. The esophagus is lined by gray, granular mucosa. The stomach contains 100 cc of clear liquid. The mucosa and wall are free of change. The small and large intestine, anus, rectum and appendix are unremarkable. The liver weighs 1,610 grams. The capsule is intact and the parenchyma is brown and of normal consistency. The gallbladder contains 5 cc of bile. No stones are present. The pancreas and submandibular glands are tan and lobular.

PAGE 3

Lymphoreticular system: The thymus is small and tan. The spleen weighs 230 grams. The capsule is intact and the parenchyma is free of change. Lymph node enlargement is not noted. There is a 1 cm, accessory spleen present.

Endocrine system: The pituitary is of normal size, and left in-situ. The adrenals are of normal size, have thin yellow cortices, and gray medullae. The thyroid contains a moderate amount of colloid and is of normal size, shape and consistency.

Urogenital system: The combined weight of the kidneys is 310 grams. The cortical surfaces are smooth. The medullary pyramids are pointed. The calyces, pelves, and ureters are free of change. The bladder is contains 200 cc of urine. The mucosa and wall are free of change. The prostate is rubbery and of normal size. The testes are left in-situ.

Musculoskeletal system: The muscles are red brown and firm. No fractures are noted.

Central nervous system: The scalp, skull, dura, leptomeninges, and cortical surface of the 1,200 gram brain show no evidence of trauma. Cut section reveals no abnormalities within the cerebral hemispheres, pons, cerebellum, midbrain or medulla.
